

## What's new at Osmoflo

### Occupational Health and Safety Certification

Osmoflo's continuing commitment to best practice and safety in the work place has been recognised through certification to Occupational, Health and Safety standard AS 4801:2001. This encompasses all processes associated with design, fabrication, installation, commissioning, servicing and maintenance of projects. The company is also well on track towards gaining certification of its environmental management system. Quality certification at Osmoflo has been in place for more than a decade.

### New office accommodation at Burton for our growing workforce

A new office building is under construction at Osmoflo's main facility at Burton in Adelaide's northern suburbs – the largest in the southern hemisphere dedicated to the design and fabrication of reverse osmosis desalination equipment. Incorporating energy efficient design principals the building is due to be completed in April 2011. New and upgraded office facilities will cater for more than 160 employees.

### 24 - Hour Operations Control Centre

In line with our objective to deliver world's best practice in operations and maintenance support, Osmoflo has opened a new Operations Control Centre at our main facility in Burton, South Australia. Manned around the clock and connected to Osmoflo-operated plants through our sophisticated PlantConnect<sup>®</sup> software, the Centre makes possible an even higher level of plant management and control. It provides a constant stream of performance and operational data essential to effective maintenance scheduling and overall asset management.
